# Container Information Messenger (CIM)

Your help with the ramp jam.

CIMply reporting.

The communication tool for the ramp

The **Container Information Messenger** simplifies the mostly cumbersome communication processes between dispatchers and drivers. Both sides have access to the CIM application (**Web & App**) and can thus exchange current information such as order start and end, possible delay messages, ramp jams, waybills or other documents in **real time**. Furthermore, the **transmission** of messages to e.g. customers is easy to implement. With CIM you, your dispatchers, your drivers and your customers always have an **up-to-date overview** of your current trucking orders.
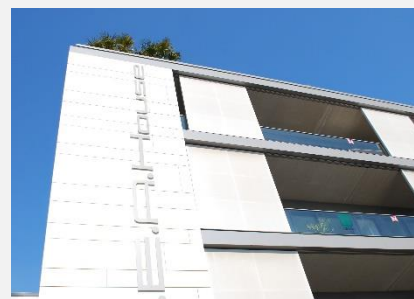

Web & App Applications

- ✓ Web view for the dispatcher and app application for the driver
- ✓ Real-time synchronization between app and web interface
- ✓ Uncomplicated integration of the system, thanks to the App Download Link and the Web Portal Link

Features

- ✓ Up-to-date overview of all relevant information
- ✓ Simplified communication processes between dispatchers and drivers
- ✓ Information exchange takes place in real time (transmission of delays, GPS data, consignment notes etc.)
- ✓ Ramp waiting times can be avoided and thus waiting time can be turned into money

The catkin GmbH

We have been developing and implementing customized communication solutions in the B2B sector since 2013. With our catkin communication portal we mainly support industrial and transport companies. With the help of our modern software technologies, our customers especially design their logistics, but also other business areas, in a transparent and secure way.
