## catkin - THE UNIVERSAL PORTAL FOR ORDER PROCESSING

The **catkin** logistics platform is the universal portal for order processing with service providers and customers, as well as for the management of mobile personnel.

The patented **catkin** platform can map almost any order structure and is available as "software as a service".

The **catkin SmartApp** effectively supports the creation of transparent processes in logistics. **catkin** creates a co-operative network of specialized companies that exchange information in real time.

Flexible mapping of individual logistics processes in real time

Transparent communication along the entire supply chain

# SEAMLESS COLLABORATION IN LOGISTICS

Web & App	Performance features
Access via standard browser	Simple collaboration with service partners (client and / or contractor)
No installation required	Fast integration into in-house software thanks to highly flexible API
<b>catkin</b> is both a customer and service provider portal	Web, app and API are available immediately after configuration
Real-time data reports via app	More than 50,000 complex orders per month
Industry-specific apps (drivers in freight forwarding, train drivers for railroads, working time management for mobile staff)	Fair, usage-based pricing model
	Patented technology

Cross-company collaboration, seamless with catkin.

# cTRANS - THE SMART FREIGHT FORWARDING SOFTWARE

Optimized for the first and last mile of container transport.

Thanks to the graphical presentation and simple user interface, you can always keep an eye on your orders, planning, master data, capacities and invoices. Many of your customers are connected to your forwarding agent via the integrated **catkin** platform, and orders are transmitted automatically. **cTRANS** integrates your mobile staff into the processes via app and thus improves the efficiency of your forwarding company.

Drive forward - with **cTRANS**!

With cTRANS, the forwarding software from the cloud, you can manage your intermodal business efficiently.

## Dispatchers

Time savings thanks to automatic order import

Fast order entry

Clear & graphical order planning

Feedback in real time

Master data management with deadline overview

Capacity overview

Invoicing

## Driver

Simple **driver app**

Paperless order processing

All order-relevant information clearly arranged in the app

GPS: track-and-trace, automatic status messages

Optional: Orders directly to the telematics system

## Customers

100 % transparency about the order status

Fast order processing

Customer portal

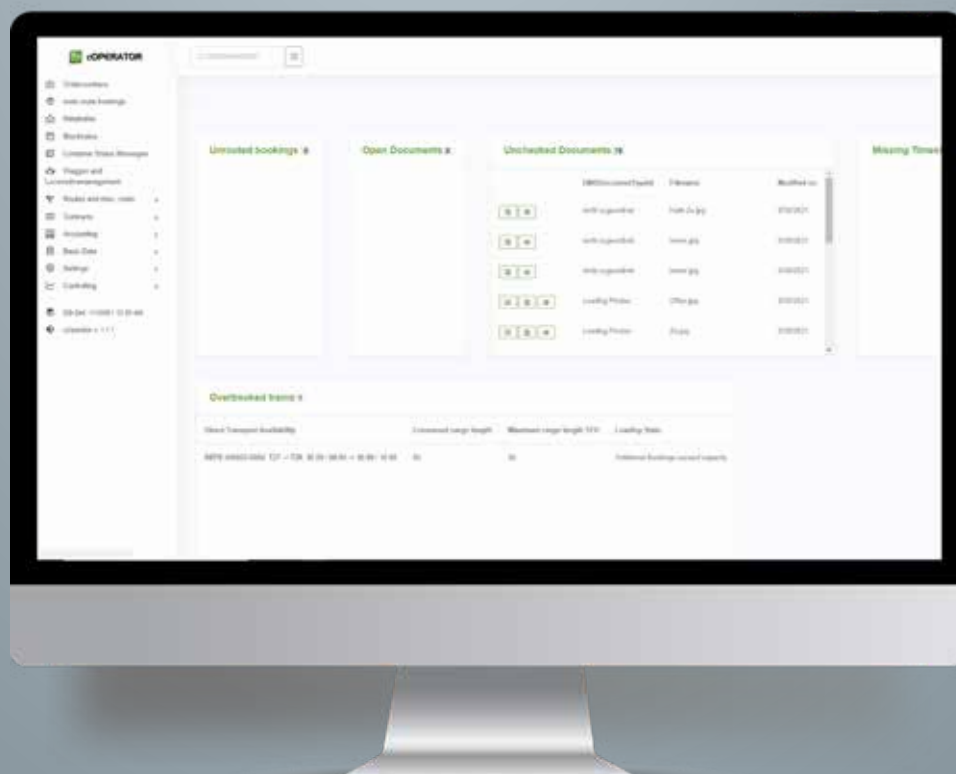

Fewer queries

# cOPERATOR - THE ALL-IN-ONE PLANNING SOLUTION

## FOR ALL AREAS OF COMBINED TRANSPORT!

Combined transport is characterized by a high degree of complexity due to its numerous interconnections. With the **cOPERATOR** planning solution, you can plan and manage the network of your service partners such as railroads, truckers or terminals directly. All power elements are simply connected to each other via **catkin** - you benefit from the automatic transparency gained throughout the network and control your system simply and efficiently.

**cOPERATOR** contains modular modules for all areas from scheduling and utilization management to commercial processing in a cloud application.

## Central

**cOPERATOR** is your central solution for planning and organizing CT networks.

## Customized

**cOPERATOR** has a modular structure and can therefore be adapted to specific customer requirements.

## Efficient

**cOPERATOR** is directly connected to the **catkin** ecosystem, which means that a lot of status data is automatically available, which in turn makes work more efficient.

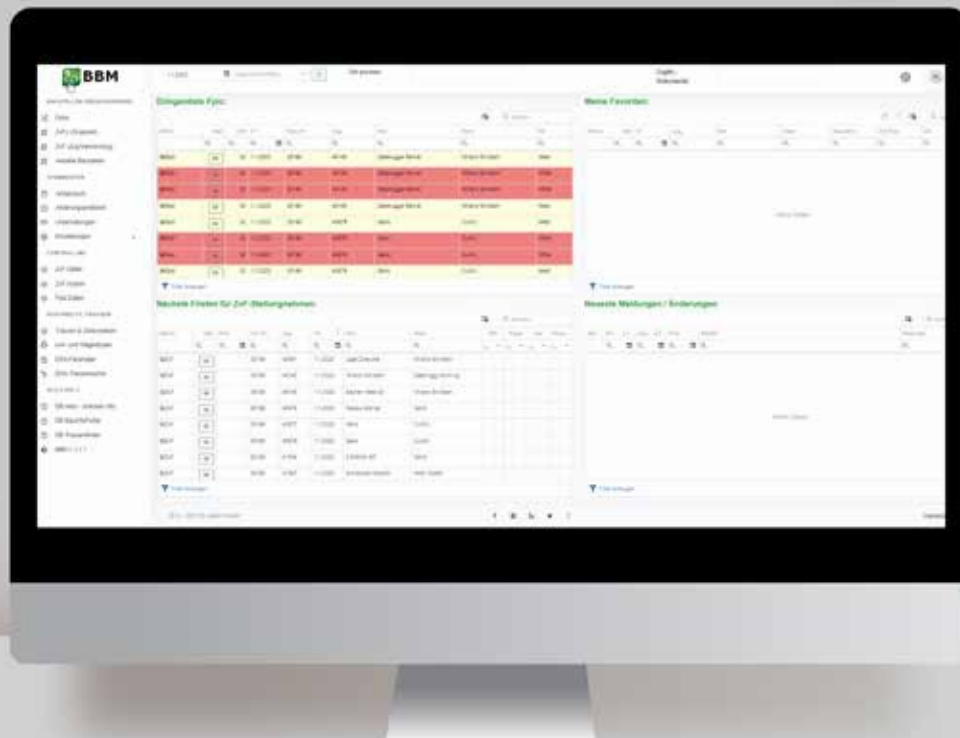

## All-inclusive

In **cOPERATOR** you will find all tasks combined in one application: planning, control, customer bookings, service provider assignment, commercial processing and much more.

---

Plan and manage complex networks easily and securely with **cOPERATOR**!

# BBM - RAILROAD CONSTRUCTION SITE MANAGEMENT

The **BBM** Railway Roadworks Manager enables you to keep track of roadworks notifications (FPLOs and ZvFs) for your rail transport company easily and clearly and to include them in your timetable planning. This means reliable

planning and enormous savings in time and money for your company.

With **BBM**, you can always keep an eye on roadworks and their impact on your traffic.

Easily manage construction site notifications.

Increase planning reliability for your rail transportation.

# CONSTRUCTION SITE MANAGEMENT AT A GLANCE

Benefits	Performance features
Clear display of all roadworks messages for easier journey planning	Clear table view & dashboards of timetable arrangements & construction site effects
High time & money savings thanks to automation of all relevant information	Clear map display of routes & detours.
Uncomplicated handling with maximum benefit for you as an energy supply company	Routability check (basis: ERA parameters)
Collaborative working in one system	Daily updated controlling area of your additional expenses
	Comprehensive construction site management
	No installation required

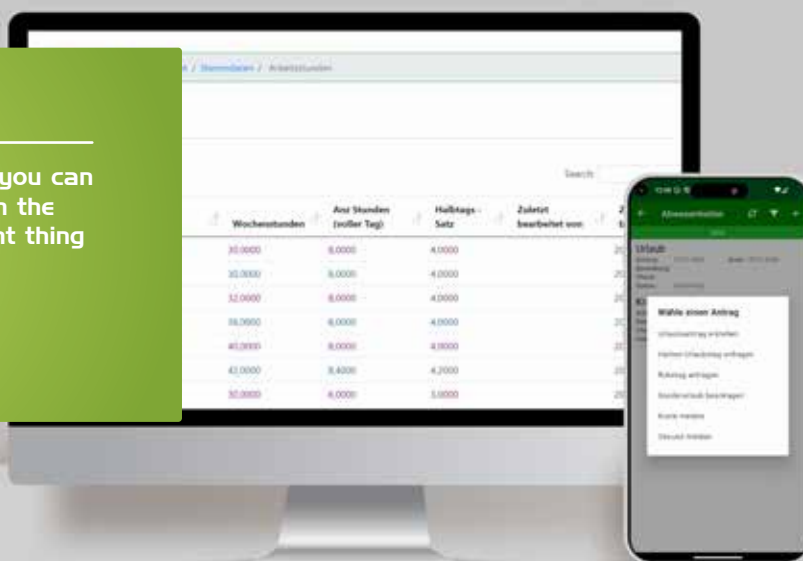

# cSTAFF - OPERATIONAL HR MANAGEMENT

Your workforce and working time management tool.

The **cSTAFF** cloud software is the right tool for anyone who wants to manage their staff simply and easily. **cSTAFF** connects mobile employees simply and directly to the workforce scheduling system via an app and can be integrated into existing internal company IT systems, making it the perfect extension to your workforce management system.

**cSTAFF** supports you in the organization of your operational staff deployment and offers you planning and evaluation functions.

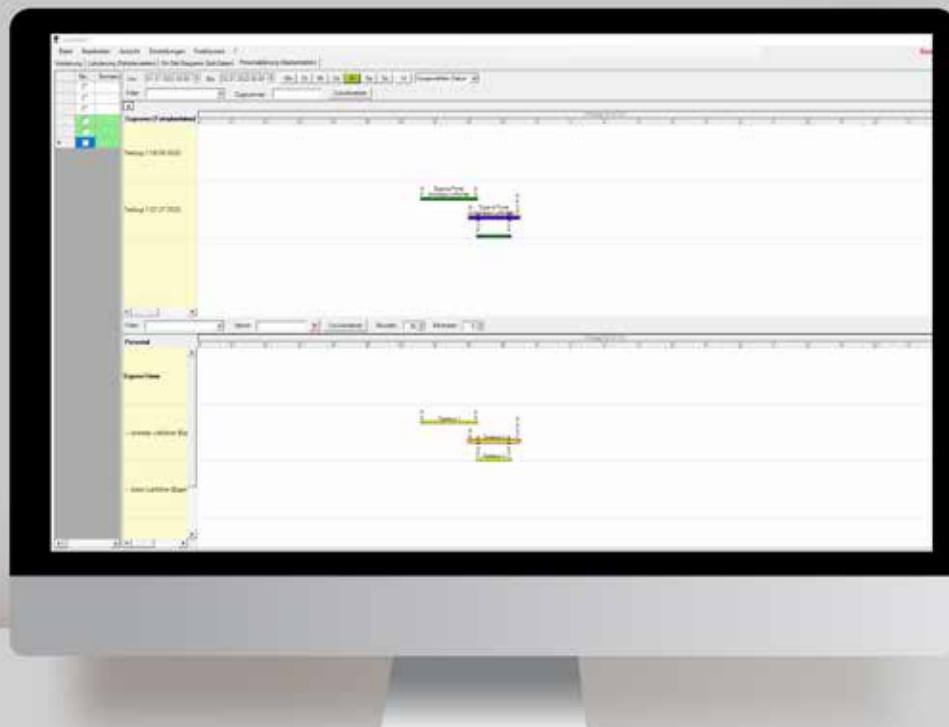

With **cSTAFF** you can concentrate on the most important thing - your staff.

HR management	Mobile employees	Team leader
Create and assign task profiles	Simple mobile recording of working hours, transparency about your own working hours at all times	Overview of team members
Create personnel file digitally, various working time models	Sick notes with the option of forwarding sick notes	Assignment and management of shifts
Create and manage employee database	Vacation request	Working hours overview
Leave management: approve leave requests and other absences	No more timesheets: fast & secure forwarding of data to the responsible departments / persons	Evaluations & reporting
Create shifts		
ArbSchG integrated		
Forwarding to payroll accounting		
Create and manage cost centers		

## LocoPlan - DIGITALIZATION OF RAIL TRANSPORT

**L**ocoPlan combines efficient railroad planning for trains, locomotives and personnel with an up-to-date overview of the current situation of your network. Maximum productivity in your daily business and the visualization of locomotive and personnel availability as well as any location and time conflicts.

**LocoPlan** offers you:

- Locomotive planning & control
- Train monitor
- Locomotive & personnel management
- Maintenance monitoring
- Networking with other systems (infrastructure management, Tf app, working time recording, etc.)

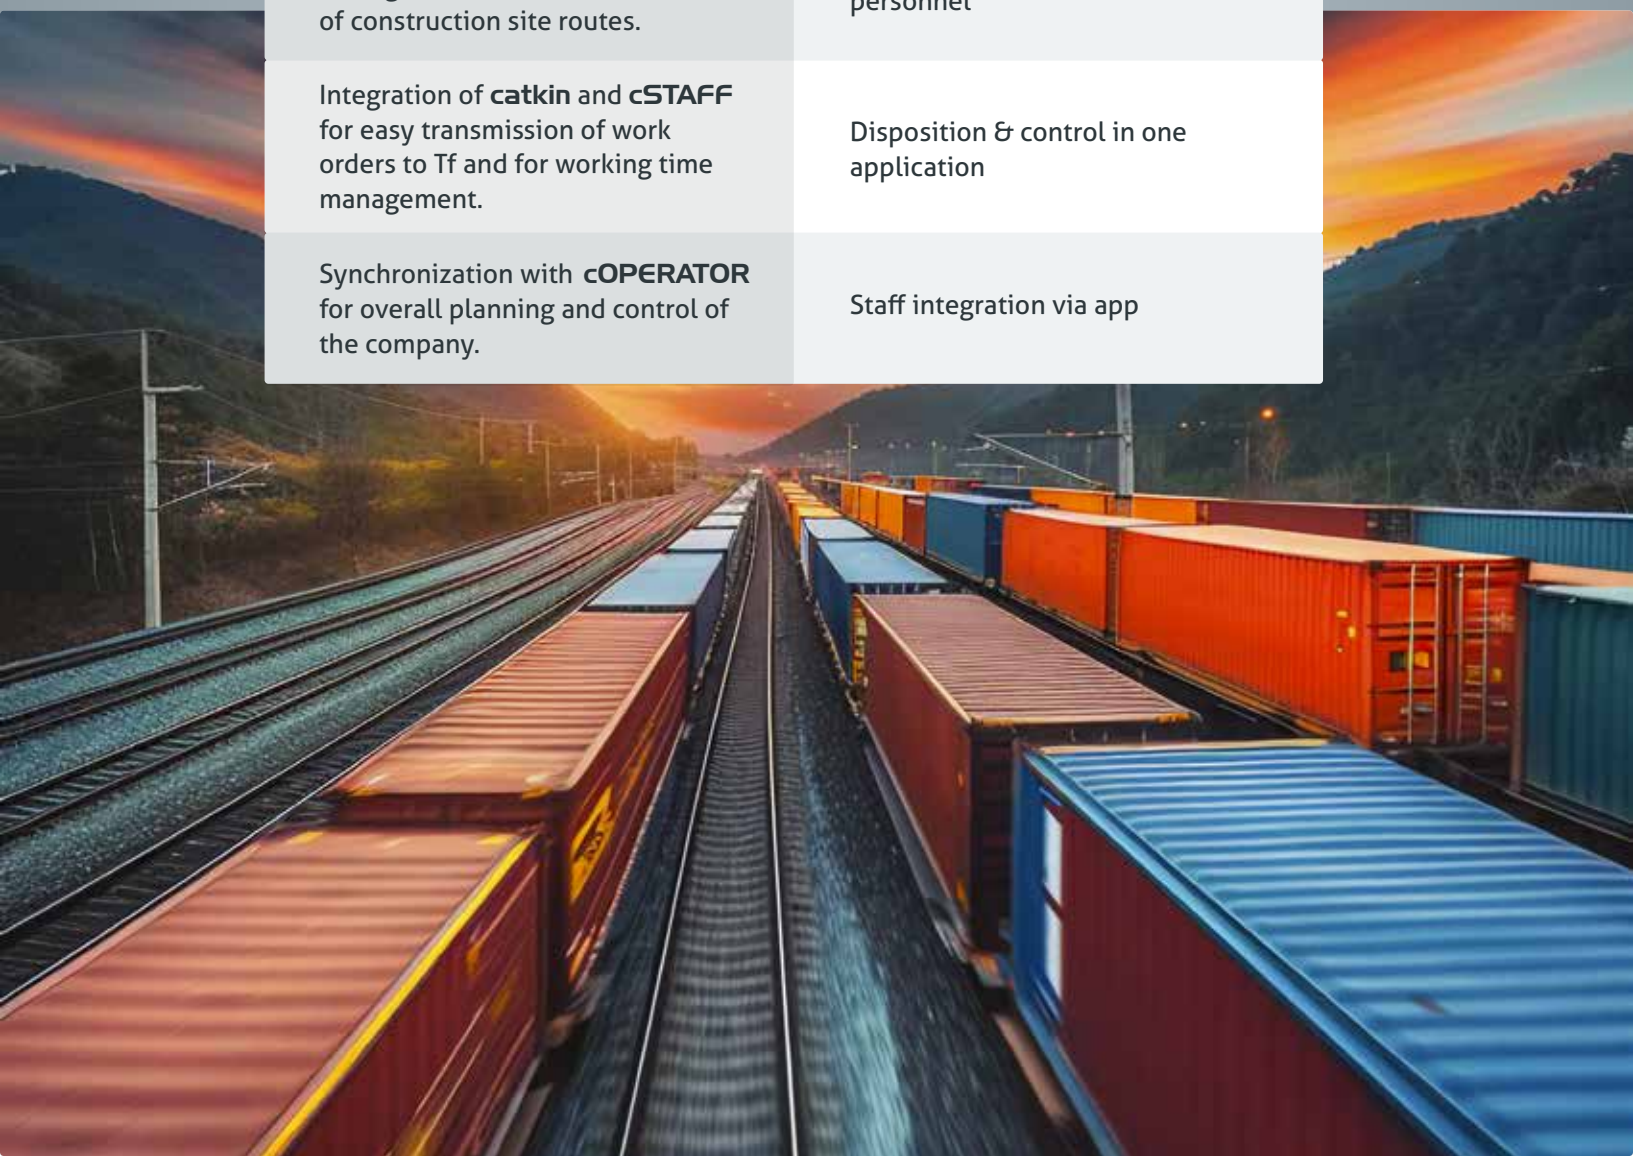

All resources and transportation in a central planning system.

Keep an eye on conflicts and availability in real time.

# THE SMART SOLUTION FOR THE RAIL INDUSTRY

Benefits	Performance features
Clear planning including all relevant information	Simple and safe planning of train services
High process reliability thanks to the clear visualization of all train run data	Pre-planning of tractions, personnel activities and timetable
Integration with construction site management for automatic transfer of construction site routes.	Assignment of locomotives and personnel
Integration of <b>catkin</b> and <b>cSTAFF</b> for easy transmission of work orders to Tf and for working time management.	Disposition & control in one application
Synchronization with <b>cOPERATOR</b> for overall planning and control of the company.	Staff integration via app

# THE RIGHT CHOICE FOR YOUR LOGISTICS PROCESSES

With solutions from **catkin** GmbH, you can rely on future-proof applications that digitize processes, create transparency and re-think collaboration along the logistics chain. Our solutions facilitate collaboration with your partners, create more efficient processes, reduce sources of error and increase your planning and execution reliability - whether in rail freight transport, intermodal logistics or the deployment of mobile employees. Integrated interfaces in infrastructure systems and existing planning systems ensure automatic, digital data exchange and support efficient processes.

You can rely on our many years of experience, our technological expertise and our understanding of the challenges facing the industry.

- ✓ Digital networking of all participants
- ✓ Platform solution instead of isolated solutions
- ✓ Mobile use - for maximum flexibility
- ✓ Patented technology and modern web solutions
- ✓ Personal support & team with industry experience
